

Technical requirements

What are the computer system requirements for this event?

Computer system requirements are as follows:

Windows 2000, XP, 2003, and Vista

- Internet Explorer 6/7/8
- Firefox 2/3
- Chrome 1
- JavaScript and cookies enabled
- Recommend ActiveX be enabled for Internet Explorer
- Intel or AMD processor (1GHz or faster)
- At least 512 MB RAM (at least 2 GB RAM for Vista)

MAC OS X 10.4, 10.5

- Safari 3
- Firefox 2/3
- JavaScript and cookies enabled
- Requires Apple Java 5 or higher
- No support for Remote Access
- PowerPC G4/G5 or Intel processor
- At least 512 MB RAM

Do I need an Internet connection?

Yes. Your computer will be receiving large amounts of streamed video during the webinar, so a wired connection is best. You may experience choppy video with a wireless Internet connection.

Do I need to have access to a phone?

Only if you won't be using your computer's speakers (or external speakers connected to your computer) to listen to the event audio.

Do I need a computer microphone or webcam?

If a student from your school has been selected to ask their question, you will need a computer microphone and webcam.

Can we have more than one classroom sign on from our school?

Two sign-ons are permitted per school. If you have multiple participants from one location you may get choppy video or poor audio. For an ideal experience on WebEx, you will need 950 kbps of bandwidth for sending video (outgoing) and +650 kbps for receiving video (incoming), or a combined bandwidth of 1.6 mbps.

Will the host be able to see or hear my class?

He will be able to see only the students who are asking questions..
